Request for Approval: Processing Toolkit Content with Claude

Group 19, Intro to AI, Fall 2026 • For Interactivity Foundation (IF) • Draft for Joshua to send

1. What we ask

May the team send Collaborative Discussion Toolkit content to Claude, an AI model made by Anthropic, for the uses listed below? You can say yes, yes with limits, or no.

2. What would be sent, and when

- **Migration of the 46 existing activities: nothing.** Activities are copied by fixed code from your Wix pages. No AI is needed for this part.
- **Optional agent runs:** short summaries of each activity's checks (titles, step counts, any problems found) when the team runs the AI orchestrator instead of the fixed pipeline.
- **New or revised activities:** the full text of the activity document, when staff use the AI to format it for the website.
- **Never sent:** ratings, comments, names of people who commented, passwords, or anything from your WordPress site other than activity text.

3. Accounts and data handling

- During the project: the team's own Anthropic account. After December 3: an account that IF holds, only if IF chooses to keep using the AI option.
- Anthropic's commercial terms and privacy policy apply. The team will attach the current summary of how Anthropic stores and uses API data, so IF can review it before deciding.
- The team keeps run files that contain activity text only on team computers, outside the code repository, and deletes them at handover.

4. If IF says no

Everything still works without AI: the fixed migration copies all activities, and staff add new activities with the template and checklist. Only the optional AI formatting and the AI orchestrator are not used.

5. Decision

Decision (yes / yes with limits / no)

Limits, if any

Name, role, date
